

I claim:

sub  
A/

1. A method for locating a network resource from a first identifier having a valid accessible first URI comprising the steps of:
  - 5 parsing at least one URI component from the first URI;  
selecting a first content corresponding to said URI component of the first URI;  
generating a valid accessible second URI that accesses said first content; and,  
accessing the first URI and said second URI.
- 10 2. A method, as set forth in claim 1, further including the step of inputting the first identifier from a user interface element.
3. A method, as set forth in claim 2, wherein said step of inputting the first identifier from a user interface element further includes the step of inputting the  
15 first identifier into one of a browser location field, text box, command line, and speech to text interface.
4. A method, as set forth in claim 1, wherein said step of selecting said first content further includes the step of accessing a second content including one of  
20 a title, meta, head, and page source from the first URI.
5. A method, as set forth in claim 4, wherein said step of accessing said second content further includes the steps of parsing at least one keyword from said second content, selecting a third content corresponding to said keyword  
25 from said second content, generating a valid accessible third URI that accesses said third content, and accessing the first URI and said third URI.
6. A method, as set forth in claim 5, wherein said first content and said third content includes selecting one of a second identifier, and advertisement.

30

7. A method, as set forth in claim 6, wherein said step of selecting said advertisement further includes the step of consulting one of a table of advertisements having groups and categories, and an advertisement cache.

5 8. A method, as set forth in claim 6, wherein said selected advertisement corresponds to competition an entity that manages the first URI.

9. A method, as set forth in claim 6, wherein said second identifier includes one of a keyword, search term, and available domain name.

10

10. A method for processing a search request having at least one keyword, wherein the search results of the search request is accessed from an accessible first URI having a query component that corresponds to the keyword comprising the steps of:

15 generating a second URI having a default file that accesses the first URI and a non-query component that corresponds to the keyword; and, accessing said second URI.

11. A method, as set forth in claim 10, wherein said search request includes a plurality of keywords and said non-query component corresponds to said keywords in a Boolean relationship.

12. A method for sending a message to an e-mail address comprising the steps of:

25    accessing an accessible first URI, wherein said first URI is not an e-mail address;  
      submitting the message to be sent from said first URI;  
      generating the e-mail address from said first URI in response to submitting the  
      message; and,  
      sending the message to the generated e-mail address.

11

5

10

13. An apparatus for locating a network resource from a first identifier having a valid accessible first URI comprising:  
a processor;  
a memory coupled to said processor;  
a browser type program;  
means for parsing at least one URI component from the first URI;  
means for selecting a first content corresponding to said URI component of the first URI;  
means for generating a valid accessible second URI that accesses said first content; and,  
means for accessing the first URI and said second URI.
